

THE BIRDS AND THE BEETLES

What's Up Around the Bend?

Responding to Rapid Ecological Change on the Colorado and Virgin Rivers

Use of the tamarisk leaf beetle to control tamarisk has caused rapid ecological changes. Many questions exist about the health of western streams and the southwestern willow flycatcher. We will explore current distribution of the tamarisk beetle, its effect on the Colorado River, and restoration efforts on the Virgin River.

Guest Speakers:

Season Martin - restoration coordinator with the Tamarisk Coalition

Mary Anne McLeod - SWCA manager, southwestern willow flycatcher monitoring

~Free and Open to the Public~
