RE: Accepting and Processing Uranium Ore from the Chemours Company at the White Mesa Mill  
Radioactive Material License Number UT 1900479

Dear Mr. Frydenlund:

In a letter dated June 25, 2020, from Energy Fuels Resources (USA) Inc. (EFRI) to the Division of Waste Management and Radiation Control (DWMRC), EFRI stated their intent to accept and process uranium ore from the Chemours Company's facility in Offerman, Georgia. According to the letter, naturally occurring uranium ore in the form of monazite sand would be sent to the Mill for processing. The Mill will recover the uranium to produce yellowcake and rare earth minerals to produce a rare earth element concentrate. Based on the information provided in the original letter dated June 25, 2020 and the response for additional information dated September 9, 2020, the DWMRC concurs that this material is naturally occurring ore and no additional licensing would be required for the Mill to accept and process this material.

The DWMRC will inspect compliance aspects of this project during future inspections at the White Mesa Mill.

If you have any questions please contact Ryan Johnson, at 801-536-4255.

Sincerely,

Ty L. Howard, Director  
Division of Waste Management and Radiation Control
